

Q1. How to expand the scope of filter from sheet level to workbook level.

Open a worksheet, such as Sheet 1.

1. Drag the required field (for example, Incident Type) from the Data pane to the Filters shelf.
2. Select the required values and click OK.

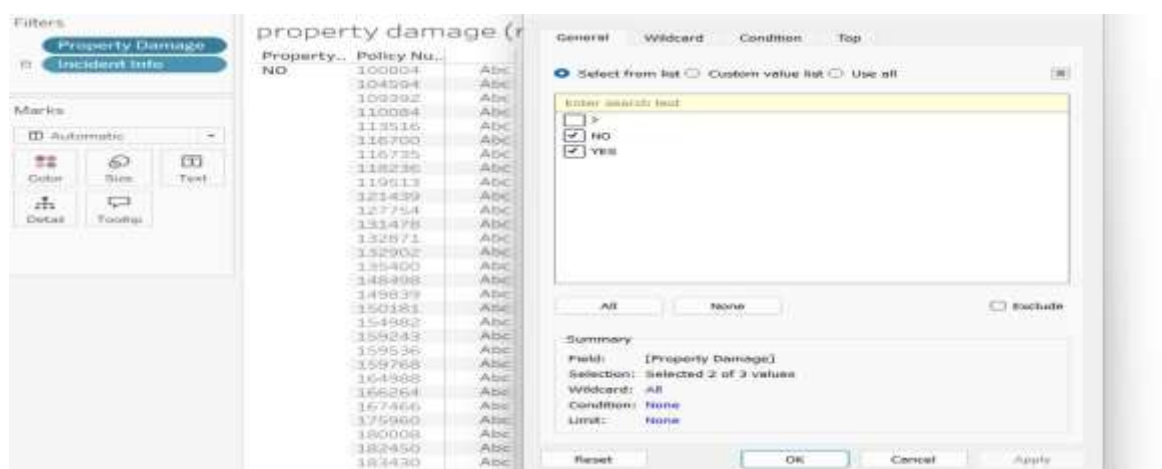

3. Right-click the filter field on the Filters shelf, or open the filter card's drop-down menu.
4. Select Apply to Worksheets → All Using This Data Source.

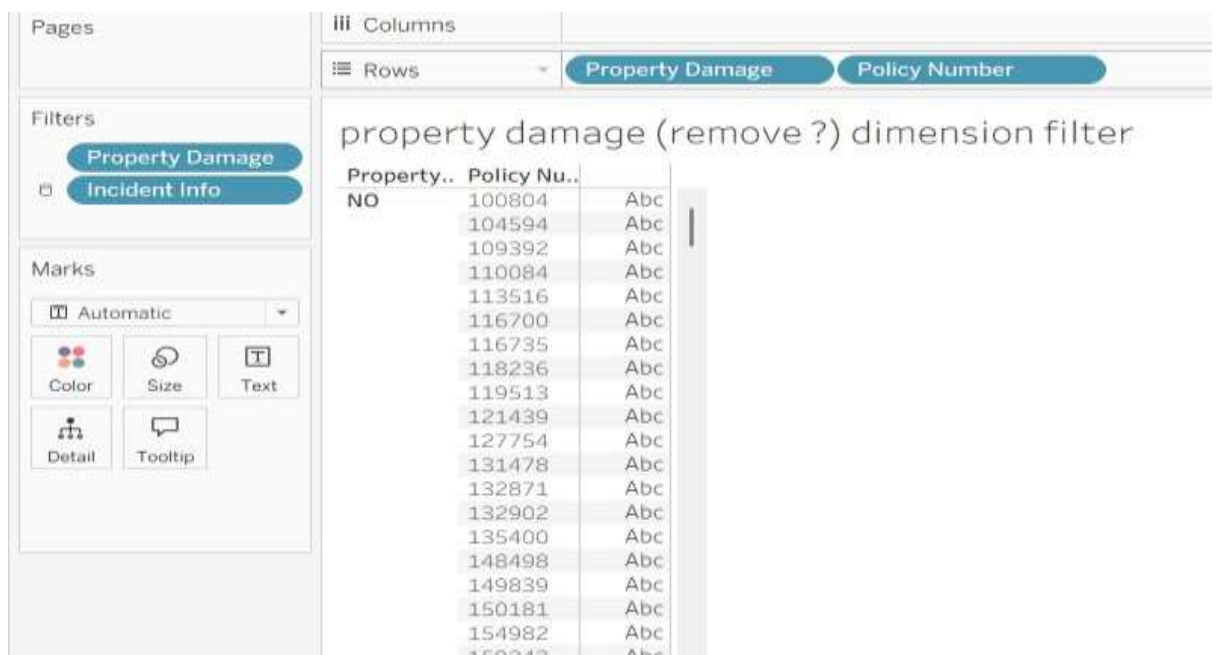

Q2. Removing the ? from property damage column using Dimension filter.

Objective: Exclude records where Property Damage contains a question mark.

1. Open a new worksheet and rename it Property Damage Filter.
2. Find Property Damage in the Data pane.
3. Drag Property Damage to the Filters shelf.
4. In the Filter dialog, select the General tab.
5. Uncheck the ? value, leaving the other values selected.
6. Click OK.

7. Drag Property Damage to Rows and use COUNT([Policy Number]) as a measure.

Q3. Create hierarchy with Incident type, Auto Make and Auto model. Rename it as Incident Info.

Objective: Create a hierarchy containing Incident Type, Auto Make, and Auto Model.

1. In the Data pane, locate Incident Type.
2. Right-click Incident Type.
3. Select Hierarchy → Create Hierarchy.
4. Name the hierarchy Incident Info.
5. Drag Auto Make into the Incident Info hierarchy.
6. Drag Auto Model into the same hierarchy, below Auto Make.

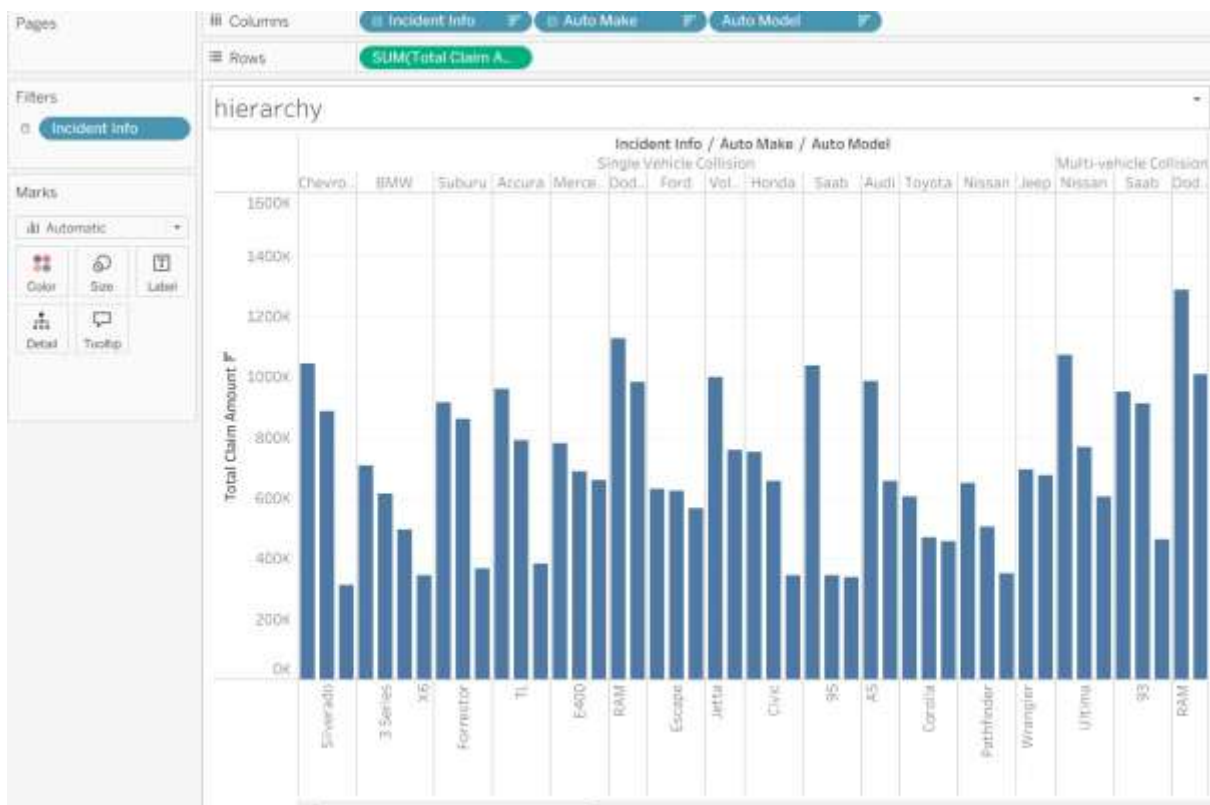

The hierarchy order must be:

Incident Info

Incident Type

Auto Make

Auto Model

Q4. Using Incident Info hierarchy show how much capital loss occurred for each auto model.

1. Create a new worksheet and rename it Capital Loss by Auto Model.
2. Drag the Incident Info hierarchy to Rows.
3. Drag Capital Loss to Columns.
4. Ensure the aggregation is SUM(Capital Loss). If needed, right-click the pill and select Measure → Sum.
5. In the Marks card, select Bar.
6. Click the plus (+) icon next to Incident Type on Rows to expand the hierarchy through Auto Make and Auto Model.
7. Expand to the Auto Model level to view the capital loss for each model.

Q5. Create a group of Policy number : P-10, P-11,P-12,P-13,P-14,P-15,P-16 and P17-P99 for Policy number start with 10,11 so on upto 99.

Step 1: Create a calculated field

1. In Tableau, go to the Data pane.
2. Right-click in an empty area and select Create Calculated Field.
3. Name it Policy Number Group.
4. Enter this formula:

LEFT(STR([Policy Number]), 2)

5. OK

Step 2: Create the group

Since your assignment specifically asks for a Group:

1. Right-click the newly created Policy Number Group calculated field.
2. Select Create → Group.
3. Select the values 10, 11, 12, 13, 14, 15, and 16.
4. Keep each of these as a separate group.
5. Select the remaining values from 17 to 99 and group them together.
6. Rename the group 17–99.
7. Click OK.

Q6. Use this created policy group to check average age of customer for Policy bind date 2013, 2014 and 2015 year.

- ✶ Drag Policy Number (group) to Columns.
- ✶ Drag Customer Age to Rows.
- ✶ Right-click the Customer Age pill → Measure → Average.

Part B: Filter Policy Bind Date

1. Drag Policy Bind Date to the Filters shelf.
2. In the Filter dialog, select Years.
3. Select 2013, 2014, and 2015.
4. Click OK.

5. Drag Policy Bind Date to the Columns shelf if you want separate columns for each year. Change its date level to YEAR.

Part C: Show the output

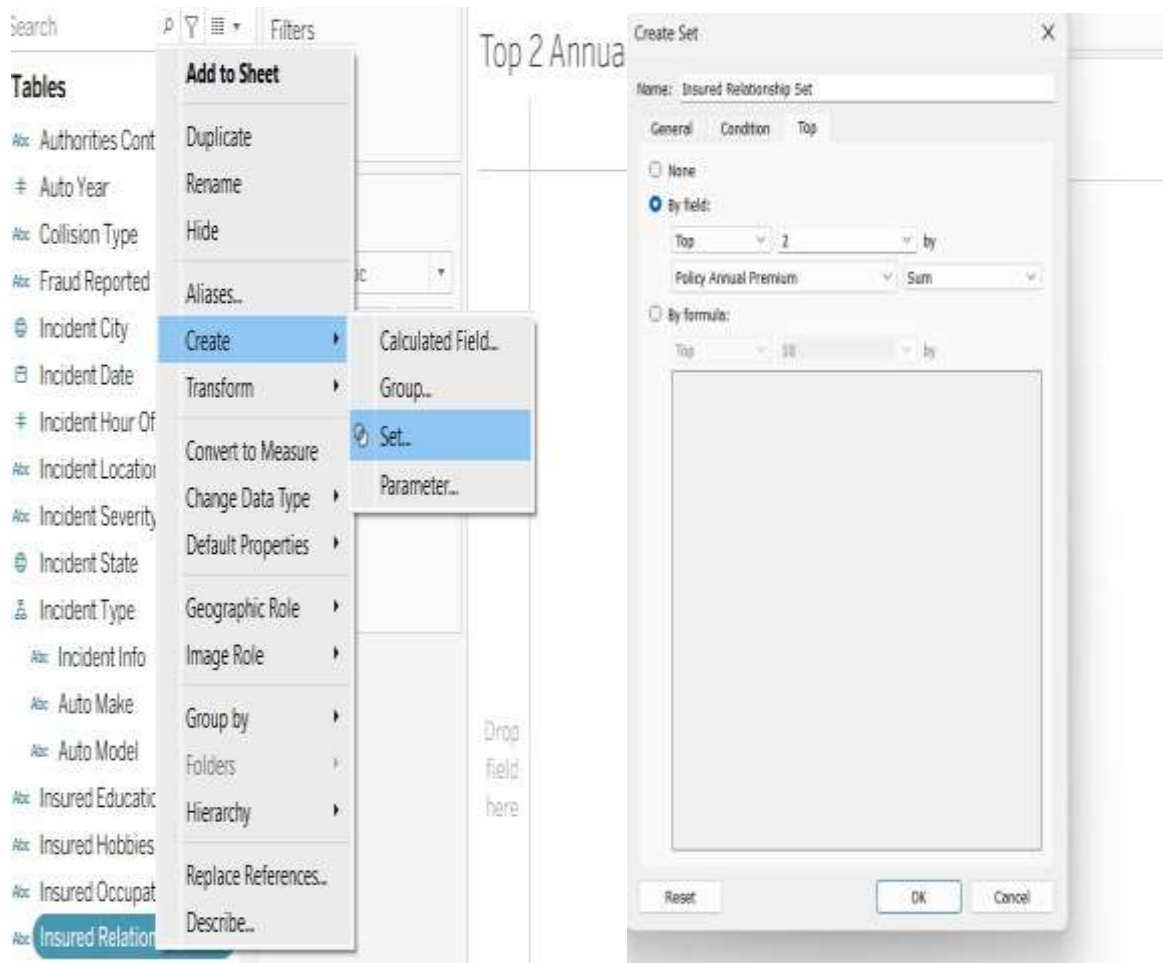

1. Select the Text Table or Highlight Table view from Show Me.
2. Make sure AVG(Customer Age) is displayed in the table.
3. Keep the Policy Number Group on Rows and Year of Policy Bind Date on Columns.

Q7. Using set on Insured relation, display top 2 policy annual premium amount.

Part A: Create the set

1. Create a new worksheet and rename it Top 2 Annual Premium.
2. In the Data pane, right-click Insured Relation.
3. Select Create → Set.
4. In the Create Set dialog, go to the Top tab.
5. Select By field.
6. Configure the Top tab as follows:
TOP – 2- BY – POLICY ANNUNAL PREMIUM – SUM
7. Click OK.
8. Rename the set Top 2 Insured Relation.

Part B: Display the Top 2

1. Drag Insured Relation to Rows.
2. Drag Annual Premium Amount to Columns.
3. Right-click the Annual Premium Amount pill and select Measure → Sum.
4. Drag the newly created Top 2 Insured Relation set to Filters.
5. Select IN and click OK.
6. Select Bar Chart from Show Me.
7. Sort the bars in descending order using the toolbar's Sort Descending icon.
