

Using Insurance.csv attempt the following

Q1. Using reference line, display average property claim for each authorised contacted.

Ans:

Step 1 — Create a new worksheet

Click New Worksheet (+) at the bottom.

Rename it:

Average Property Claim by Authorities Contacted

Step 2 — Add Authorities Contacted

From the Data pane:

Drag:

Authorities Contacted → Rows

You should see each authority/contact category listed.

Step 3 — Add Property Claim

Drag:

Property Claim → Columns

Make sure it is:

AVG(Property Claim)

If Tableau shows SUM(Property Claim):

1. Click the drop-down on the pill.
2. Select Measure.
3. Select Average.

You should now have a horizontal bar chart.

Step 4 — Add the Reference Line

Go to the left side:

Analytics

Find:

Reference Line

Drag Reference Line onto:

Table

or Entire Table.

Step 5 — Configure the reference line

A dialog box will open.

Set:

Value → Average

You can leave the aggregation as Average.

For Label, choose:

Value

Then click:

OK

Result

You will have:

- **Y-axis:** Authorities Contacted
- **X-axis:** Average Property Claim
- **Reference line:** Overall average Property Claim

The reference line lets you compare each authority's average property claim with the overall average.

Q2. Using box and whisker plot, display make wise vehicle claim for each policy number.

Ans:

Step 1 — New worksheet

Click New Worksheet (+).

Rename:

Vehicle Claim by Auto Make and Policy

Step 2 — Add Auto Make

Drag:

Auto Make → Columns

Step 3 — Add Vehicle Claim

Drag:

Vehicle Claim → Rows

Keep it as:

SUM(Vehicle Claim)

You should now have a bar chart.

Step 4 — Add Policy Number

Drag:

Policy Number → Detail

on the Marks card.

This tells Tableau that the individual policies should be considered within each Auto Make.

Step 5 — Create the Box Plot

Go to:

Analytics

Find:

Box Plot

Drag Box Plot onto the view.

Drop it when Tableau highlights the appropriate area.

Alternatively, depending on your Tableau version:

Show Me → Box-and-Whisker Plot

Result

You should now have a box-and-whisker visualization showing the distribution of:

Vehicle Claim

for each:

Auto Make

with individual:

Policy Numbers

contributing to the distribution.

Important

If you want to see the individual policy numbers, you can also drag:

Policy Number → Detail

and optionally:

Policy Number → Label

But don't put Policy Number on Columns unless your instructor specifically wants a separate box for every policy.

Q3. Forecast the total claim amount for year 2015,2016,2017,2018,2019.

Ans:

Step 1 — New worksheet

Click:

New Worksheet (+)

Rename:

Total Claim Amount Forecast 2015-2019

Step 2 — Add Policy Bind Date

Drag:

Policy Bind Date → Columns

Tableau will create a timeline.

Step 3 — Set the date level

Click the drop-down on the Policy Bind Date pill.

Choose:

YEAR(Policy Bind Date)

You should see years along the X-axis.

Step 4 — Add Total Claim Amount

Drag:

Total Claim Amount → Rows

Keep:

SUM(Total Claim Amount)

You should now have a line chart showing total claim amount by year.

Step 5 — Make sure it is a line chart

On the **Marks** card:

Change:

Automatic → Line

Now you should have a time-series line.

Step 6 — Open Analytics

Click:

Analytics

on the left side.

Find:

Forecast

Drag:

Forecast → View

Tableau will automatically add a forecast.

Step 7 — Set the forecast period

Right-click somewhere in the visualization and select:

Forecast → Forecast Options

Look for:

Forecast length

Set it to:

Exact → 5

if you need the next five periods.

However, there is an important point here.

Your assignment specifically says:

2015, 2016, 2017, 2018, 2019

So first check whether those years already exist in your Policy Bind Date data.

If 2015–2019 are historical years in the dataset, you should not treat them as future forecast years. Instead, Tableau's forecast should be generated from the earlier historical periods and extended into those years.

For example:

Historical data

2011 — 2012 — 2013 — 2014

Forecast

2015 — 2016 — 2017 — 2018 — 2019

Step 8 — Show forecast

After adding Forecast, Tableau will display:

- Historical **Total Claim Amount**
- Forecast values
- Forecast confidence interval

The forecast area will usually appear as a shaded region around the predicted line.
